

SYSTEMS

//DEUS EX

Frictionless collaboration.

The ultimate shared storage for video teams. Built and custom-tuned to your specific workflow and team with the flexibility to adapt to changing needs.

//DEUS EX DIMENSIONS: 16.9" W x 26.8" D x 6.9" H

THE NO-COMPROMISE PERFORMANCE TIER

The //DEUS EX is built for the most demanding workflows: high-resolution image sequences, VFX, and large-scale collaborative projects. Animation and visual effects teams often work with each frame of video as a separate file, enabling them to render individual frames without re-rendering the entire clip, saving valuable time. The //DEUS EX is capable of providing the performance needed to achieve real-time playback of numerous high-resolution files per second while maintaining scalability. Without the proper hardware, bottlenecks can lead to costly delays, requiring numerous revisions and reducing overall production quality. The //DEUS EX provides an affordable hybrid SSD/HDD solution that meets bandwidth and IOPS demands to maintain uninterrupted creative flow.

The //DEUS EX grows with your needs, supporting expansions to accommodate increased data loads and providing flexible networking options for a future-proof investment. The optional hybrid architecture combines the benefits of HDDs for large-capacity storage with NVMe SSDs as a performance tier, ensuring seamless access to frequently used data.

KEY FEATURES:

- 128-bit File System
- Intel® Xeon Processors
- 24 x SAS Drive Bays
- 2 x 10 Gb/s Ethernet Ports
- 16/18/20 TB Helium-filled HDDs
- 3.2/7.68/12.8/15.36 TB NVMe SSDs
- 25, 40, 100 GbE NIC (Optional)

TARGET WORKFLOWS:

- Large-Scale Post Production
- VFX and Animation
- AI and Machine Learning
- Broadcast & OTT Distribution

Multiple Ways to Collaborate

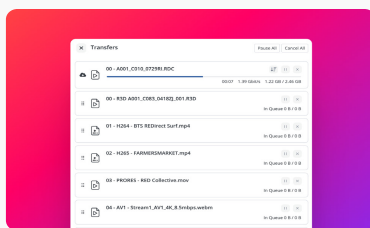

Centralized shared storage brings your team together in one place, keeping everyone on the same page with access to the same projects and media assets.

Mount to Desktop

Direct access to centralized storage spaces for accessing files in post production applications.

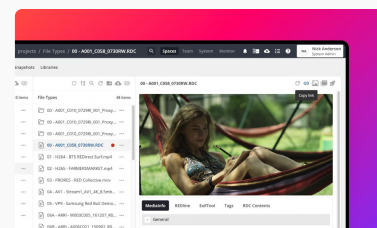

Bookmark and launch a file to mount the shared space and open it in the default application on your desktop.

Transfer Folders & Files

Upload and download from anywhere without zipping or using the cloud as a middleman.

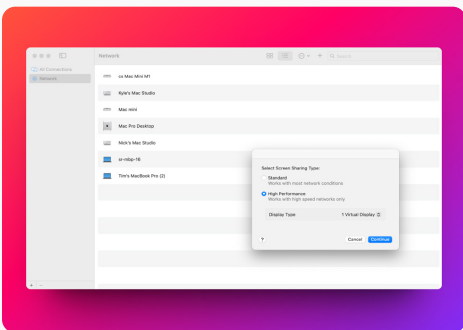

Manage a queue in the transfer panel with the ability to pause, cancel, and change priority.

Share via Links

Custom Domain for each server gives every space, folder, and file a URL for access via web browsers.

Media Support with an HTML-5 player, thumbnail generation, and metadata viewing for 200+ formats.

Screen Sharing

High-performance mode built into MacOS Sonoma enables remote editing with low latency without compromising color fidelity.

Parsec or HP Anywhere for Windows (Bring your own).

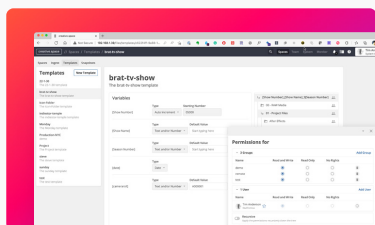

Secured via VPN with AES-256 encryption with peer-to-peer (P2P) networking.

Private Hosting

Co-locate your workstations in our datacenter with our cloud storage for high-performance remote editing.

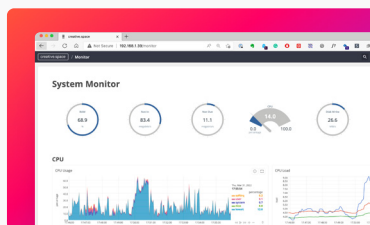

Hosting starts at \$295 per month

Easy Access Control

Manage Permissions to control access to spaces, folders, and file using our built-in users and groups.

Folder Templates make it easy to stay organized with fixed permissions and custom variables in file/folder names.

Proactive Support

Monitoring over 2000 metrics every second to trigger 150+ pre-built alarms that trigger our support team.

Data Protection features ensure like self-healing and snapshots stop data loss from human-error to ransomware.
